BATTERY INFORMATION

- Pure Lead Technology, with the highest CCA rating and Reserve Capacity of all the batteries made today.
- Designed to meet any application head on with its unmatched 1150 CCA starting power, combined with Deep Cycling capabilities.
- Allow discharges to a depth of 80% over 400 times.

- YellowTop® high-performance AGM battery is one of the only true dual-purpose automotive batteries available.
- Repeatedly bounces back from deep power drains to full energy capacity.
- Lower internal resistance provides more consistent power output and faster recharges.

- Advanced AGM, provides all the benefits of AGM, creating the highest CCA and capacity possible.
- Utilizes traditional tried and proven manufacturing processes; balance of cost and power.
- Packaged in durable polypropylene case, increasing protection of the battery.

- AGM technology, certified nonspillable AGM separator immobilizes acid.
- Patented full frame punched grids with wrought alloy (pos/neg).
- Rugged construction with reinforced polypropylene case and cover.

- The patented manufacturing process makes the battery grids more resistant to corrosion.
- Designed to meet or exceed OE specifications along with pertinent governing body standards.
- Batteries with this specific grid technology routinely outlast other manufacturers' batteries in extreme heat and stop-and-go driving.

- The Heavy Series of batteries provides exceptional cranking capabilities to start even the largest engines.
- Designed to meet the demands of constantly charging and discharging while still delivering exceptional performance.
- Available in 700 CCA, 925 CCA, and 1000 CCA.
